Asset360™ is an on-site Equipment Management Program designed by UHS to help you achieve optimum clinical, operational and financial outcomes. By acquiring and assuming responsibility for entire fleets of medical equipment, we help your caregivers devote the majority of their time to patient care instead of dealing with equipment issues.

**Returning caregivers to efficient patient care**
A census spike triggers a drop in available infusion pumps. Caregivers spend an hour looking for the right piece of equipment. Broken equipment sits unused. Sound familiar? The Asset360 program eliminates unproductive scenarios like these. Asset360 is designed to manage classes of high-volume equipment — infusion therapy, for example. We either acquire your equipment inventory, or provide a flexible upgrade option and assume the management responsibility for it. That’s delivery, pickup, cleaning, maintenance, repair and regulatory documentation.

**Right equipment, right place, right time**
With the Asset360 program, your caregivers simply order the equipment they need and they get it: the right equipment, delivered to the right place at the right time, in patient-ready condition — cleaned, functional, and with the correct software and disposables. There’s no compromise: you get the equipment you need for your patients, with exemplary service.

“Asset360 has created a positive impact on our equipment management. We launched Asset360 at nine of our facilities to centralize our infusion technology. Since then, we’ve added therapy surfaces to our program. UHS has been a tremendous partner throughout.”

Dan Humphrey
System Executive, Supply Chain Services
Memorial Hermann Healthcare System
ASSET360 PROGRAM BENEFITS

Clinical
• Increases caregiver satisfaction, efficiency, and productivity
• Eliminates “hunting, gathering, and caching” of equipment
• Reduces therapy delays and allows for more time at the bedside with prompt access to patient equipment
• Patient-ready equipment and proven management processes decrease potential for infection

Operational
• Ensures on-demand availability of patient-ready equipment
• Every device thoroughly cleaned, maintained, repaired and inspected
• Proprietary equipment tracking software offers accurate and real-time reporting that facilitates process improvements
• Improves reporting and documentation for The Joint Commission and other accreditation programs
• Flexible options to upgrade technologies
• Includes MyUHS: an on-demand, online tool for ordering and managing equipment plus generating accurate reports

Financial
• Increases operating and financial viability with pay-per-use model
• Allows reallocation of capital budgets for other capital needs
• Eliminates costs of ownership such as purchasing, maintenance, repair and accessories
• Potential for converting underused equipment into cash
• Eliminates peak-need rental expenses
