A 62% increase in devices-per-bed over the past 20 years has increased costs, workloads and complexity in clinical engineering. You’re asked to do more with less — negotiate service contracts, manage software-driven equipment and retain talent. UHS addresses these challenges with solutions ranging from on-demand supplemental technician support to full outsource programs.

Get the analytics you need to forecast services, plan for capital acquisitions and gain access to rigorous back-end data to demonstrate service compliance.
Flexible Options — Scalable Service

From basic technical support to diagnostic imaging specialists and experts in capital planning, get flexible and scalable service to fit your needs.

Expert, qualified UHS service technicians provide preventive maintenance and repairs on-demand. Local technicians are available on an hourly or block-of-time basis.

Many customers rely on us to provide regular preventive maintenance and repairs for specific equipment types. In addition to cutting costs, this approach adds predictability and eases the burden on your in-house team.

UHS technicians can provide regular on-site support for specific assignments or for all your general biomed equipment. Reduce the burden on your clinical engineering team so they can focus on higher-value equipment.

A full outsource program allows you to reduce overall service costs. Our trained experts can source parts, manage all equipment and repairs, ensure compliance, provide vendor and contract management and capture relevant data for supply chain analytics.

One Element of a Broader Solution

UHS is fast becoming a preferred source for clinical engineering support because of the quality of our technicians and the flexibility of our offerings. But clinical engineering alone doesn’t address equipment utilization, vendor standardization or controlling rental and capital costs. We’ve developed a new approach called Equipment Value Management (EVM) that connects these areas and multiplies your savings.

EVM includes a mix of rental services, on-site management and technical support to bridge the gaps between clinical, supply chain and clinical engineering teams. The outcomes? Clinicians get more face time with patients, supply chain teams uncover deep savings and clinical engineering departments solve the persistent problem of MME backlogs. We can quickly optimize service, reduce waste and lower your costs.

About UHS

We offer a full range of equipment-based services, including rental, on-site managed services and supplemental clinical engineering services. Working side-by-side with clinicians, supply chain teams and clinical engineers in more than 7,000 locations gives us a unique perspective on medical equipment management. We believe optimizing patient outcomes and driving meaningful operational savings requires an end-to-end approach. So, we offer solutions that connect departments, fix fragmented processes and free health care professionals to focus on what they do best — providing exceptional care and best-in-class patient experiences. For information on how we do this, visit www.uhs.com.
